## General Information

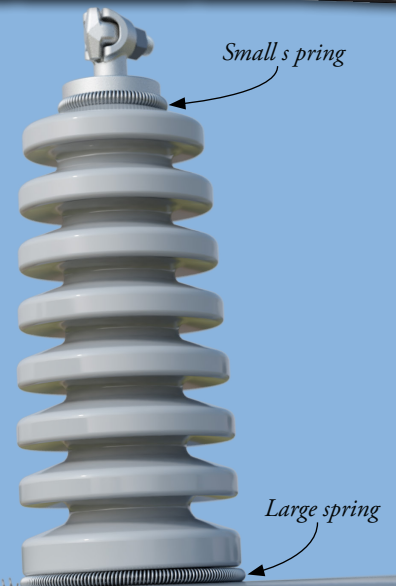

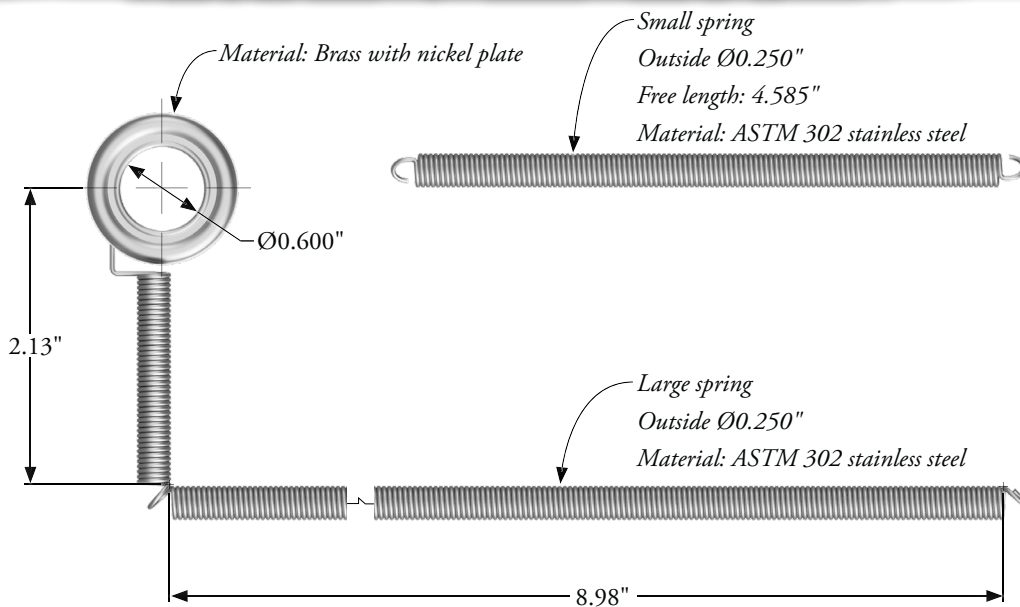

**ECI** introduces the bushing Anti-Tracking Kit for use on Distribution Transformer high voltage bushings in contaminated areas.

Installation of the Anti-Tracking Kit is performed by placing the small spring around the bushing top casting between the casting and the porcelain making sure it touches both. The larger spring is then placed around the lower porcelain touching both the porcelain and the tank cover. The grommet on the loose end attached to the bottom spring should be tightly attached to the tank ground nut.

The springs used in the Anti-Tracking Kit are 302 stainless with a nickel plated brass grommet.

# BEYOND THE STANDARD

Tank ground nut

Catalog Number	Description
7590ZA0199	Anti-tracking kit (Large and small spring)
